

Excel Data Cleaning & Transformation

1. Identified missing values — filtered Price and Category columns for blanks; found 3 missing prices and 4 missing categories.
2. Handled missing Price — set to 0 to flag for review.
3. Fixed inconsistent Product Name casing — applied PROPER() to standardize text.
4. Fixed Category typo — replaced "Electroni" with "Electronics" using Find & Replace.
5. Removed duplicates — used Remove Duplicates (all columns); 3 exact duplicate rows removed.
6. Split Product ID — used Text to Columns (delimiter -) to separate Day, Month, Country Code.
7. Rebuilt Manufacturing Date — combined Day/Month with DATE() + MATCH(); assumed year 2026.
8. Merged columns — combined Brand Name + Product Name into Product Brand.
9. Formatted Price — applied currency format (2 decimals).
10. Formatted Manufacturing Date — applied custom format dd-mm-yyyy.
11. Applied conditional formatting — added data bars to Price; added highlight rule for Category = "Electronics".
